1. GENERAL SPECIFICATIONS

Legrand UPS model Keor-T 100 is an uninterruptible power source with 3-Level IGBT switching technology, high frequency PWM technology, Double Conversion On-line, solid neutral, with the possibility to have on site modular redundancy up to total 8 units, Rated Power 100 kVA – 90 kW.
Batteries are lead acid, sealed, free maintenance, valve regulated, and arranged in external battery cabinet.

1.1 Architecture

Legrand UPS model KEOR T 100 has stand-alone architecture. UPS is composed by following parts;

- IGBT Rectifier/PFC
- 3-Level IGBT Switching Technology
- Digital Signal Processor (DSP)
- 3.5" TFT Touch Panel
- Automatic Bypass
- Dual Input Bypass
- Internal Manual Bypass
- Standard Internal Backfeed Protection

The UPS can be easily configured on site, by the authorized personnel, to operate in parallel. Also it is possible to arrange the dual bypass by removing bridge connection on each input phase

Legrand Keor-T 100 has 3-Level IGBT switching technology and there is no transformer in the unit. These provide high efficiency for the unit

Backfeed protection provides additional protection at the input in the event of bypass thyristors are short circuited.
By using internal backfeed contactor in bypass line provides safety when fault situation occurs in static bypass line and prevents upstream energy to the input.
The internal backfeed protection provides an easy on site installation without any additive cabling or special MCCB type in the upstream distribution panel.

1.2 Redundancy:

The Redundancy of the UPS allows N+X redundant and power upgrade configurations. Parallel feature is standard at Keor-T 100. Up to 8 units of same size UPS can be connected in parallel.

1.3 By-pass

Keor T has internal both static bypass and mechanical (maintenance) bypass as standard. Addition to this input and bypass inputs can easily be separated to obtain dual input by removing the bridge on the connector.

1.4 Control and Monitoring:

Keor T is equipped with a touch screen graphic TFT display that provides information, measurements, statuses and alarms of the UPS in different languages. Below this display, there is a multicolour LED bar showing status of UPS.

- GREEN: Normal or ECO Mode Operation
- ORANGE: Bypass or Battery Operation
- RED: Load not Supplied

A dedicated software of remote monitoring and management, installed on a PC connected to the UPS, allows to check and set all working parameters of Keor T (the same functions available on the UPS control panel) and, furthermore, to schedule and program computer remote shutdown. Optional software (UPSMAN) or Net Interface card (CS121 SK) allow the multi server shutdown and UPS remote control on the LAN. Also, standard interface board comes with;

- RS232 Serial Communication Port
- Emergency Power Off (UPS OFF)
- Generator Contact (GEN ON)
- 4pcs programmable Dry Contact Information
- 2 contactor relays for Bypass and Battery
- ModBus (over RS485, with 2400 Baud Rate)

Standard Dry Contact Alarms are General Alarm, Bypass Active, Input Failure and Synchronization OK. Addition to these; High Temperature, Battery Test Failure, Output Failure alarms can be assigned to the contacts. Each alarm can be assigned to separate contacts but also one alarm may be assigned to all contacts.

Keor T front panel is controlled by DSP microprocessor which works together with DSP microprocessors in rectifier and inverter; by display is possible to check all measurements, working parameters and status of the system.

Here follow the measurements and working parameters available on the display:

The UPS KEOR T has the CE Mark accordingly with the EU Directives 73/23, 93/68, 89/336, 92/31, 93/68 and it complies with following standards:

- EN 62040-1 "General rules for electric safety"
- EN 62040-2 "Electromagnetic compatibility and immunity (EMC)"
- EN 62040-3 "Performances and testing rules"
